Demonstration of using Gradescope to submit a homework assignment.

These instructions assume you have typed your answers in word or other word processor or hand-written them on pieces of paper.

What you need to do:

- Upload your work to Gradescope, either

  - Type your answers and insert any graphics using a word processor
    Save your work as a .pdf format file.
    Click on the assignment to go to Gradescope. You should see a Submit Assignment page
    Choose Submit PDF and upload your file to Gradescope

  - Or, use your mobile phone to scan the pages of your work using the Gradescope Mobile App
    I believe this requires downloading the App to your phone.
    This will upload your assignment.

- Tell gradescope where to find your answer to each problem, i.e., which page of your file has the answer to each question.

  - You will see a list of the questions on the HW assignment and an image of each page of your file

  - Each page has a number in the bottom left.

  - Select the question number, then left-click the appropriate page number

  - To assign the same page to multiple questions, use shift-left click on the question to assign the same page to additional questions

- Click the submit button in the bottom right.

All our assignments will be what Gradescope calls Homework/Problem Set assigments.

Information for students is available at
https://guides.gradescope.com/hc/en-us/categories/21540043398413-Student-Center
I found the "How can I submit my homework as a PDF?" page in the Student FAQ section to be extremely helpful. Also useful were the "Using the Gradescope Mobile App for Students" and "Best practices for submitting an assignment" pages in the Submitting Assignments section. There is also a "Submitting an Exam/Quiz or Homework/Problem Set assignment" page.

If you change your mind after submitting answers, you can resubmit your work anytime up to the submission deadline. See the "Resubmitting an Assignment" page in the Viewing your Submission and Grades section.
